

Restrict access to data

There are several ways to *temporarily* restrict access to your data.

⚠️ if your data can't be made public, figshare is not the platform you want to use.

- [Definitions](#)
- [Embargo](#)
- [Confidential](#)

Data - both files and metadata - can either be **private** (not published) or **published**.

Within those two broad categories, data can also be **embargoed** or made **confidential**.

- For all options, you the uploader have access to your metadata and files via the editing window.
- For all options, a DOI may be reserved.
- For all options, you may generate a "**private link**" that enables another person to view *and download* the files and metadata for your dataset(s)
⚠️ Use Private Link SPARINGLY.

All options for restricting access to your item can be found at the bottom of the editing window, below the license metadata.

-  **Apply embargo**
-  **Make file(s) confidential**
-  **Generate private link**
-  **Reserve Digital Object Identifier**

Definitions

For all **Published** items

- **Embargo** - hides the *files* and sets a time limit after which the files are publicly available.
 - You can also embargo the entire item (metadata and files) **WHAT?**
 - Metadata is visible to anyone, along with the length of the embargo and the reason for the embargo
 - When the embargo period is up, files are automatically made available.
- **Confidential** - hides the files though metadata is visible

For all **Private** items

- Metadata is only visible to you and your collaborators (for items that are part of projects.)

	private (= not published)	private link users	embargo (private)	embargo (published)	confidential (private)	confidential (published)
Metadata visible	No	Yes	No	Yes, includes when embargo will end	No	Yes
Files visible/downloadable	No	Yes	No	No	No	No

🔑 What's the deal with the **Private Link**? if you choose "Generate private link" in the item editing window, anyone ANYWHERE with that link will be able to view your files regardless of their publishing status. *You can disable this link* by editing the item and clicking the red x next to Generate Private link.

⚠️ Use Private Link SPARINGLY.

Embargo

The option to set an embargo is at the bottom of the item editing window

This item is public (files are under embargo)

Apply embargo disable x

On file(s) only On the whole item

Select period or

Reason:

[Generate private link](#)

DOI Digital Object Identifier

10.5072/FK2_stagefigshare.6258491

Cancel DOI 🔗 🔒 Publish changes Save changes

i note that if you want to choose a specific date, the date appears in standard European format dd/mm/yyyy which is compatible with ISO 8601

- You can apply the embargo to the files only or the entire item
- what happens?
- Set the period of embargo or choose a specific date
 - You can change the date at any time *up to* the end of the embargo period
- You must provide a reason
- You can disable the embargo by mousing over the small **x** to the right of the **Apply embargo** heading. The word **disable** will appear. next to the **x**.
- When disabling the embargo, if the item has already been made public, the entire item will be available and visible to people.
- Unless you have not published the item, or have made it **Confidential**, after the embargo end date or period is reached, the item will automatically be made public.

Confidential

The option to make your item confidential is also at the bottom of the editing window

This item is public (files are confidential)

Make file(s) confidential x

Reason:

[Generate private link](#) x

<https://si.figsh.com/s/8d0b6cfd708ae1c8f01b>

Note: Do **not** reference this link in papers. Use the public DOI.

DOI Digital Object Identifier

10.5072/FK2_stagefigshare.6391091

Cancel DOI 🔗 🔒 Publish changes (new version) Save changes

In the example above, the item has been published (is "public") but made confidential, and a private link has been generated to share it.

- to make the files available, click the x to the right of Make file(s) confidential and save changes
- to disable the private link click the x to the right of Generate private link
