

# Macros - embed special content in your page

Using macros helps you to expand the capabilities of your Confluence pages, allowing you to add extra functionality or include dynamic content. For example, use the [Attachments macro](#) to list files attached to a page, or use the [Widget Connector macro](#) to include things like a YouTube video or Twitter feed.

Below is a non-comprehensive list of macros included with SI's Confluence. Click a macro name for details of the usage, including optional parameters and examples.

- [Attachments Macro](#)
- [Blog Posts Macro](#)
- [Change-History Macro](#)
- [Chart Macro](#)
